

C1 HCaaS

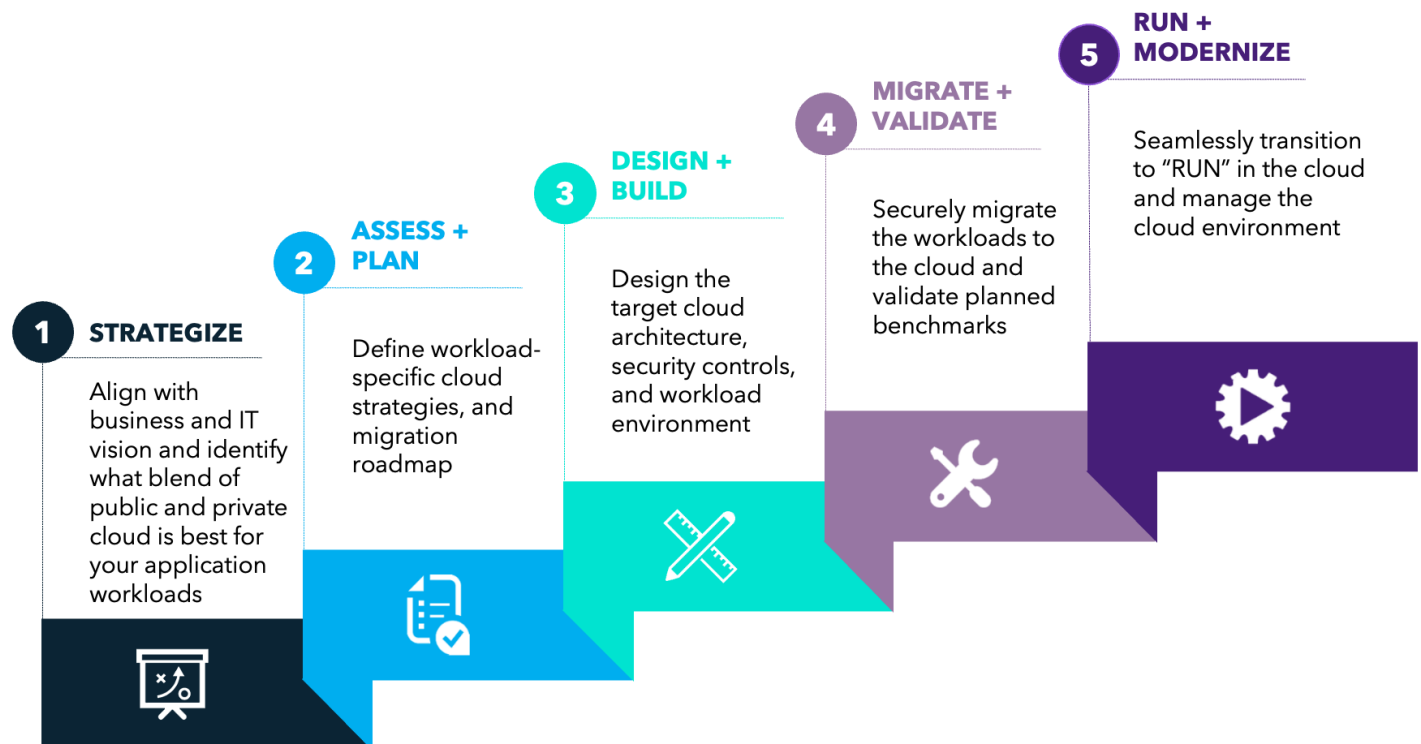

Overcome the Challenges of a Hybrid Cloud Infrastructure

Do you have a hybrid cloud strategy?

As companies continue their shift to a “cloud-first” approach, a key challenge is identifying what blend of public and private cloud is best for their application workloads.

C1 HCaaS can help develop a comprehensive, hybrid cloud strategy, complete with an intelligent design and application migration plans.

Start with our Infrastructure Discovery Interview to determine the right infrastructure strategy, and what the best blend of private and public cloud infrastructure is required.

The C1 HCaaS Solution revolves around providing organizations with the right IT infrastructure solution for their specific application workload needs, combining the benefits of both public and private clouds in a powerful and flexible, cost-effective consumption-based model.

Private Cloud

DELLTechnologies
A P E X

For our Private Cloud solution, C1 partners with Dell APEX. The solution is implemented by C1 Professional Services in the clients' location of choice (on-premises, in a co-location data center, or in a C1 data center) and is maintained, monitored, and managed by C1 Managed Services. The C1/Dell APEX solutions include:

Flex-on-Demand

Customized infrastructure subscription to fit any business need and growth

APEX Subscriptions

Pre-packaged subscription service for compute, storage, or capacity resources

APEX Storage for Public Cloud

Expands their Private Cloud solution to public cloud (ground-to-cloud) by making their enterprise-class storage available to AWS and Azure public clouds with new management tools like APEX Navigator to centralize management activities across clouds.

Public Cloud

For public cloud, C1 helps our clients stand-up and build-out the right public cloud foundation/landing zones to meet their needs.

C1 partners with Amazon (AWS) or Microsoft (Azure) to provide capacity, C1 Consulting and Professional Services to assist our clients with architecting, configuring, and migrating application workloads to the public cloud.

Virtualized Cloud

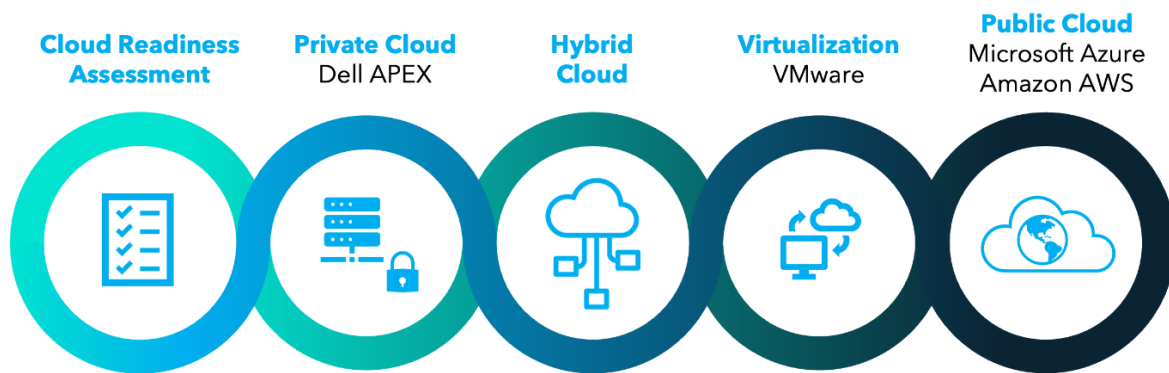

For virtualized cloud solutions, C1 helps deliver virtualized and software-defined data center (SDDC) technology everywhere our clients manage workloads.

With VMware Hybrid Cloud-Cross services, clients get a single operation model for all their applications, based on the most proven and widely developed cloud infrastructure in the world. By partnering with C1 for their Hybrid Cloud needs, our clients experience positive business outcomes, including:

- Comprehensive Hybrid Cloud Strategy with workload orchestration across cloud platforms
- Simplified IT Management with C1 managing all IT assets from a single pane of glass, saving our clients time and improving efficiency
- Scalability with a solution designed to scale as our client's business grows allowing the flexibility to add or remove resources as needed
- Security with a solution built with security as top-of mind providing features such as data encryption, multi-factor authentication, and threat prevention
- Cost Savings as our HCaaS Solutions are built as OPEX models allowing our clients to avoid the high, up-front costs of purchasing and maintaining traditional on-premises hardware and software
- Flexibility as an outcome of our clients having a choice of the level of services that best meet their needs, from basic device management to more advanced features like analytics and automation

Capabilities

Beyond Designing, Implementing, Configuring, and Managing the Hybrid Cloud

By partnering with C1 for their hybrid cloud needs, our clients experience positive business outcomes, including:

- Hybrid Cloud Consulting
- Application Workload Rationalization
- Application Workload Migration
- Disaster Recovery
- VMware Cross-Cloud Replication & Management
- And more...
