

C1 Audio, Visual, and Video Collaboration Solutions

Modern meeting spaces designed, deployed, and supported from end to end

Modern meeting spaces are no longer just rooms with screens and cameras. They are critical workplace experiences that determine how effectively employees connect, customers engage, and hybrid teams get work done. When the experience is inconsistent, difficult to use, or hard to support, productivity suffers.

C1 helps organizations design, deploy, and manage modern audio visual and video collaboration environments that are simple to use, reliable to operate, and built for the way people actually work.

What We Help You Do

Exceptional collaboration does not happen by accident—it is designed. C1 helps organizations create meeting environments that remove friction for employees, improve engagement with customers and partners, and simplify operations for IT and facilities teams. We help customers:

- **Assess** current rooms, platforms, workflows, and user experience gaps
- **Define** practical room standards across huddle rooms, conference rooms, boardrooms, training spaces, and large meeting environments
- **Design** audio, video, display, control, and room system experiences around how people actually meet
- **Support** video environments such as Webex, Microsoft Teams, Zoom, Google Meet, and mixed collaboration environments
- **Plan** for network, security, device management, support, and lifecycle readiness
- **Deliver** installation, integration, testing, documentation, adoption, support, and managed services

Why C1

Many providers can install meeting room technology. C1 helps customers create a connected, repeatable, and supportable collaboration experience across the business.

Experience-first design

We focus on the real meeting experience: clear audio, intelligent camera coverage, simple content sharing, intuitive controls, and meeting equity for in-room and remote participants.

Certified collaboration expertise

C1 brings deep experience designing and deploying Cisco collaboration environments, supported by engineers who understand the platform, device ecosystem, interoperability considerations, and enterprise requirements. That expertise helps customers get strong performance from Cisco room technologies while maintaining flexibility across Webex, Microsoft Teams, Zoom, Google Meet, and mixed-platform environments. C1 does all of this with the customer's needs and platform strategy at the center.

Full-lifecycle ownership

C1 connects advisory, engineering, AV design, professional services, project delivery, adoption, managed services, and lifecycle support—so customers are not left coordinating disconnected vendors.

The outcome

With C1, organizations can create meeting spaces that make work easier, interactions better, and results more measurable.

Customers gain consistent meeting experiences across locations, better hybrid collaboration, stronger adoption of existing collaboration investments, reduced support complexity, and a clear roadmap for modernization and lifecycle management.

Start Here

Begin with a Video Collaboration Readiness and Room Standards Assessment. C1 will evaluate the current environment, identify gaps, define the right room experiences, and create a practical path from design to deployment.

Let's build meeting spaces that people want to use—and IT can confidently support.

C1 makes modernization real—delivering secure, practical solutions for AI-powered communications, infrastructure, and security that drive measurable outcomes from day one. Focused on real-world results, C1 combines industry-leading partner technologies with deep expertise across advisory, professional, and managed services. From healthcare and education to government and financial services, C1 designs and delivers solutions that are faster, simpler, and more resilient—turning transformation into tangible value.
